The global Food Grade Deep Sea Fish Oil market size is predicted to grow from US\$ 539 million in 2025 to US\$ 675 million in 2032; it is expected to grow at a CAGR of 3.3% from 2026 to 2032.

Fish oil refers to the oil in fish that is rich in EPA (eicosapentaenoic acid) and DHA (docosahexaenoic acid). Ordinary fish contain very small amounts of EPA and DHA, while fish in the sea, such as anchovies, anchovies, sardines, etc., have higher levels of EPA and DHA. Because there is no essential difference between ordinary sea fish oil and deep-sea fish oil, EPA and DHA, the main deep-sea fish species Large-scale artificial breeding has been achieved. At the same time, due to cost and price restrictions, fishing of deep-sea fish is no longer used for fish oil extraction, so this report generally refers to all marine fish oil.

Food grade deep sea fish oil is a nutritional supplement rich in omega-3 fatty acids, derived from deep-sea fish and processed through high-quality extraction and refinement processes to meet food-grade standards. With the growing awareness of health and increased attention to cardiovascular, brain, and eye health, food-grade deep sea fish oil is gaining popularity in the market. Enriched with essential components such as EPA and DHA, it is believed to have positive effects on cardiovascular function, anti-inflammatory properties, and immune support. Market trends indicate a continuous increase in consumer demand for natural and healthy products, and food-grade deep sea fish oil, with its natural origin and outstanding nutritional value, is gradually becoming one of the highly sought-after products in the field of nutritional supplements.
