Enzyme preparations are an additive that may or may not ultimately appear in the final food. Enzymes are naturally occurring proteins that promote biochemical reactions by breaking down larger molecules into smaller structural units. Enzymes can be obtained by extracting from plant or animal products or from microorganisms such as bacteria, and used as substitutes for chemical technology. Enzymes are mainly used for baking (to improve dough), making fruit juice (to increase yield), brewing and brewing (to improve fermentation), and cheese making (to improve curd formation).

The global Food-Grade Enzyme Preparation market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
