The global Food-Grade Grape Seed Extract market size is predicted to grow from US\$ 219 million in 2025 to US\$ 341 million in 2032; it is expected to grow at a CAGR of 6.5% from 2026 to 2032.

Food-grade grape seed extract is a plant extract made from the seeds of the grape (*Vitis vinifera*), a plant in the Vitaceae family, through processes such as extraction, concentration, separation, purification, and drying. Its core active ingredient is proanthocyanidins (OPC, especially oligomeric proanthocyanidins). It complies with national food safety standards or international food regulations and is a natural substance that can be used as a food ingredient, food additive (antioxidant), or health food ingredient.

Food-grade grape seed extract is a light brownish-yellow to dark brown powder with a characteristic grape aroma.

The upstream of the food-grade grape seed extract industry uses grape processing by-products as its core raw material, including winemaking by-products, fresh grape processing by-products, and grape seed-specific cultivation. Midstream production processes include solvent extraction, supercritical CO₂ extraction, enzymatic-assisted extraction, and membrane separation technology. Downstream applications focus on its natural antioxidant properties, finding applications in health foods, functional beverages, baked goods, and nut products.

In 2025, global sales of food-grade grape seed extract reached 2,800 tons, with a production capacity of approximately 3,300 tons, an average selling price of US\$80/kg, and an average gross profit margin of 38%-45%.
