Abstracts

The global Food Grade Nisin market size is predicted to grow from US\$ 394 million in 2025 to US\$ 607 million in 2032; it is expected to grow at a CAGR of 6.6% from 2026 to 2032.

Food grade nisin is a natural antimicrobial peptide produced by the bacterium *Lactococcus lactis* and widely used as a food preservative to inhibit the growth of Gram-positive bacteria and spoilage microorganisms. It is commonly applied in dairy products, processed meat, canned foods, beverages, and ready-to-eat products to extend shelf life and improve food safety. As a naturally derived preservative approved in many countries, nisin is increasingly used as a clean-label alternative to synthetic preservatives. From a value chain perspective, upstream includes fermentation substrates, microbial culture strains, fermentation equipment, and purification materials; midstream involves microbial fermentation, extraction, purification, drying, and formulation into standardized food additive products; downstream demand comes from food manufacturers in dairy, meat processing, canned food, beverage, and convenience food industries. In 2025, the average selling price of food grade nisin is approximately US\$68 per kilogram, with global demand reaching around 5,950 tons. The industry maintains a gross margin of 32%-50%, supported by specialized fermentation technology, regulatory approvals, and increasing demand for natural preservatives.

Demand for food grade nisin is increasing as food manufacturers seek natural preservatives that support clean-label product positioning. Regulatory pressure to reduce synthetic additives and the expansion of ready-to-eat food categories are accelerating adoption across dairy and processed meat applications. In addition, advancements in fermentation efficiency and formulation technologies are improving production yield and cost competitiveness.
