Oryzanol (cereal fiber) is a food additive that is usually added to food to increase the fiber content of food and improve the taste and nutritional value of food. Oryzanol is mainly derived from cereals, such as wheat, rice, corn, etc. Its main components are insoluble fiber and soluble fiber, such as cellulose, hemicellulose, lignin, etc. Food-grade oryzanol is usually processed and purified to ensure that it meets food safety standards and quality requirements. It can be used as a natural food additive and is widely used in various food manufacturing, such as bread, cereals, cereals, biscuits, puffed foods, etc. Adding oryzanol can increase the fiber content of food, help promote digestive tract health, prevent constipation, lower blood sugar and blood lipids, and other benefits. When choosing food-grade oryzanol, consumers should choose products that meet food safety standards and consume them in appropriate amounts based on their personal health conditions and nutritional needs. At the same time, care should be taken to avoid excessive intake of oryzanol to avoid causing digestive discomfort.
