Food grade polyaluminum chloride is a kind of food grade or milk food grade powdered fine powder made of aluminum hydroxide powder and high-purity hydrochloric acid by spray drying. It is very easy to melt when exposed in the air. In recent years, food grade polyaluminum chloride has replaced aluminum sulfate as a neutral sizing precipitator in the paper industry. Food grade polyaluminum chloride is called high-purity iron free white polyaluminum chloride due to its high purity, Compared with other polyaluminum chloride, the quality is higher. The main raw materials are good aluminum hydroxide powder and hydrochloric acid. The production process is spray drying method, and the

domestic technology is relatively good. Food grade polyaluminium chloride is used as sizing agent for paper making, sugar decolorizing and clarifying agent, tanning, medicine, cosmetics, fine casting and water treatment.
