Abstracts

The global Food Grade Polyglycerol Polyricinoleate?PGPR? market size is predicted to grow from US\$ 142 million in 2025 to US\$ 188 million in 2032; it is expected to grow at a CAGR of 4.1% from 2026 to 2032.

Food grade polyglycerol ricinoleate (PGPR) is a food additive derived from the esterification of plant-derived polyglycerol and castor oil. It is primarily used as an emulsifier and viscosity modifier. It reduces the viscosity of products such as chocolate, improves flowability, and enhances processing performance. The upstream raw materials are mainly castor oil and polyglycerol. The downstream application market is primarily in the food industry, where it is used as a highly efficient emulsifier and viscosity modifier in chocolate and its products, confectionery, ice cream, and cocoa products. Global sales in 2024 were approximately 35,000 tons, with an average market price of approximately US\$4,000 per ton. The industry's gross profit margin ranges from 15% to 30%.

PGPR, as a highly lipophilic emulsifier, can significantly reduce the yield stress and viscosity of chocolate systems, reducing the amount of cocoa butter and cocoa butter substitutes required while maintaining the same fluidity. It is one of the key functional additives used in chocolate and cocoa products in conjunction with lecithin. Furthermore, as a bio-based surfactant derived from castor oil and glycerin, it aligns with consumers' growing preference for clean labels and natural ingredients.
