Food-grade potassium bicarbonate, also known as baking soda or baking powder, is a common food additive with the chemical name Potassium bicarbonate. It is a form of potassium bicarbonate (KHCO_3), the potassium salt of bicarbonate. In food processing, it is mainly used as a leavening agent, leavening agent and acidity regulator. Potassium bicarbonate releases carbon dioxide gas during the baking process, causing food to expand and increase volume and softness. This property makes potassium bicarbonate an important ingredient in many baked goods, such as cakes, cookies, bread, etc. In addition, potassium bicarbonate can also adjust the pH of food, and also has a certain impact on adjusting the taste and quality of food. It is worth noting that although potassium bicarbonate is a food additive and is safe when used appropriately, corresponding regulations and guidance must be followed when using it to ensure food safety and quality.
