Abstracts

The global Food-grade Salt market size is predicted to grow from US\$ 19418 million in 2025 to US\$ 23542 million in 2032; it is expected to grow at a CAGR of 2.8% from 2026 to 2032.

Food-grade salt is a crystalline sodium chloride-based food ingredient that meets food safety and quality requirements for direct human consumption, foodservice use and food manufacturing. It is produced from seawater, natural brine, underground rock salt or salt-lake resources through solar evaporation, mining, brine extraction, vacuum evaporation, refining, drying, screening, iodization, reduced-sodium blending and packaging. The product scope mainly covers table salt, cooking salt, food-processing salt, foodservice salt, iodized salt, non-iodized salt, reduced-sodium salt, double-fortified salt, sea salt, rock salt, lake salt, vacuum salt and specialty culinary salts. Its core functions include seasoning, flavor enhancement, food preservation, curing, texture control in processed foods and, in some markets, public nutrition delivery through iodine fortification.

Based on our research, the food-grade salt industry should be understood as a mature essential food ingredient sector rather than a fast-growing specialty chemicals market. Its competitive foundation is built on salt resources, refining capacity, food safety compliance, distribution reach, public-health regulation and consumer branding. Although edible salt represents only a portion of the broader salt industry, it generally commands higher value per unit than bulk industrial salt because of packaging, fortification, food-grade quality control, branding and specialty product positioning. Growth is structurally moderate, with baseline demand linked to population, food manufacturing and foodservice activity, while sodium-reduction policies constrain volume expansion in mature markets.

From the demand side, household table salt is the most visible segment, but food

processing and foodservice remain the more structurally stable demand base. Industrial food customers require consistency in purity, grain size, solubility, anti-caking performance, certification and supply continuity, which favors large producers and established refiners. At the same time, iodized salt continues to play a public-health role in many countries, while reduced-sodium salt, double-fortified salt, sea salt, rock salt and branded specialty salts are gaining share in higher-value niches. The industry's long-term outlook is therefore stable but not high-growth, with value creation shifting from volume expansion toward product mix upgrading, health-oriented formulations and regional brand differentiation.
