Food grade SCARA robots refer to SCARA robots that comply with the hygiene standards and safety requirements of the food industry. SCARA stands for Selective Compliance Assembly Robot Arm, also known as a horizontal multi-articulated robot arm, which is a special type of industrial robot with a cylindrical coordinate system. This type of robot features three rotational joints, four axes, and four degrees of freedom, enabling positioning within a plane and movement of the end joint perpendicular to the plane. They undergo special treatments in terms of material selection, design structure, and surface treatment, resulting in robust construction, corrosion resistance, ease of cleaning, and compliance with food safety regulations. All axes utilize food-grade lubricants to ensure safe and efficient operation in food processing, packaging, and other related environments without contaminating the food.
