Food grade silica gel is a kind of inorganic polymer colloidal material, which is condensed from silicic acid. Its main component is $\text{SiO}_2 \cdot n\text{H}_2\text{O}$. Its content is more than 98%. It is non-toxic and tasteless. Its chemical properties are stable. Under normal conditions, it does not react with any acid and alkali except caustic soda and hydrofluoric acid. Because it is a colloidal structure, it has many micropores and large specific surface area.
