Sodium hydroxide food grade is a common chemical used in food processing. It is a white solid that is very soluble in water and has a strong alkalinity. It is mainly used in food processing, Century egg production, seafood soaking, pharmaceutical industry, condiment production, etc. Sodium hydroxide can be used to adjust the pH value of food to achieve the desired acidity or alkalinity. In food processing, pH regulation is crucial for maintaining the quality and taste of food. For example, when making bread, sodium hydroxide can be used to neutralize acidic substances in the dough, achieving the desired pH value, making the bread softer and increasing the shelf life of the food.
