Food Grade Softening Resin is an ion exchange resin specially used for softening drinking water, food processing (such as decalcification of sugar solution, juice processing), etc. It removes hardness ions such as calcium and magnesium in water through ion exchange reaction, reduces water hardness, prevents scale formation and improves the taste and safety of water. Food grade softening resin must meet strict hygiene standards (such as US FDA, European COE, Chinese national health standards, etc.), ensure that no harmful substances (such as carcinogens such as ethylene dichloride EDC) are released during the treatment process, and pass international certifications such as NSF/ANSI 44 & 61, WRAS, etc.

United States market for Food Grade Softening Resin is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
