The global Food Grade Sorbitol Solution market size is predicted to grow from US\$ 1009 million in 2025 to US\$ 1396 million in 2032; it is expected to grow at a CAGR of 4.8% from 2026 to 2032.

In 2025, the global production of food-grade sorbitol solution is approximately 1.35 million tons, with an average selling price of about US\$764 per ton. The capacity of a single production line is approximately 45,000 tons per year, with an average gross profit margin of about 10-25%. Food-grade sorbitol solution is a colorless, transparent liquid produced from glucose through hydrogenation, refining, and concentration. It is a safe food additive, mainly used as a sweetener (sweetness is about 60% of sucrose, but it does not raise blood sugar), a humectant (to prevent food from drying out and to preserve freshness), a stabilizer, and an excipient. It is widely used in sugar-free foods, baked goods, confectionery, and beverages, and is particularly suitable for people with diabetes, obesity, and those who need to control their blood sugar levels.

The upstream raw materials for food-grade sorbitol solution mainly come from agricultural deep-processing products, with corn starch as the core ingredient. Glucose syrup, produced from corn starch through enzymatic saccharification, is its direct raw material; in addition, tapioca starch and wheat starch are also optional raw materials, and hydrogen is a key auxiliary material in the hydrogenation process. Its downstream applications are extensive, mainly used as a sweetener and humectant in sugar-free candies, chocolates, baked goods, beverages, frozen desserts, and meat products.

United States market for Food Grade Sorbitol Solution is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
