Food grade succinylated monoglycerides is a non-ionic emulsifier produced by esterification reaction of food grade glycerol and succinic acid. It has good hydrophilic and oleophilic balance properties and can form a stable interface structure in oil-water systems, achieving functions such as emulsification, dispersion, stability, and improving texture. It meets the safety standards for food additives and is widely used in dairy products, baking, beverages, and oil products to enhance product stability, taste, and processing performance. In 2025, global Food Grade Succinylated Monoglycerides production reached approximately 39.16 K MT, with an average global market price of around US\$ 4,469 per MT. Food grade succinylated monoglycerides has an annual production capacity of 60 K MT and a gross profit margin of about 30%.

Upstream: Glycerol; Succinic acid; Catalysts and additives.

Downstream: dairy products, baking, beverages, etc.

The cost of raw materials accounts for 65% -75% of the total cost; Manufacturing cost accounts for 10% -15%; Labor and management costs account for 5% -10%; Energy consumption and environmental protection costs account for 5% -8%; Sales and transportation costs account for 3% -5%.
