Abstracts

The global Food Grade TPE Belts market size is predicted to grow from US$ 287 million in 2025 to US$ 392 million in 2032; it is expected to grow at a CAGR of 4.7% from 2026 to 2032.

Food grade TPE belts are conveyor components made from thermoplastic elastomer materials, combining the high elasticity of rubber with the processability of plastics. They are non-toxic, odorless, lightweight, wear-resistant, oil-resistant, hydrolysis-resistant, and capable of withstanding low temperatures. Their surfaces are smooth or specially treated to enhance slip resistance and antibacterial properties, ensuring flexibility and mechanical stability during food production. In 2024, the food grade TPE belt production was 1.27 million square meters, with an average price of 220 USD per square meter.

The outlook for monolithic TPU conveyor belts is highly promising, driven by the acceleration of industrial automation, increasingly stringent food safety regulations, and the growing demand for energy-efficient and environmentally friendly conveying solutions. Looking ahead, innovations in TPU materials—such as enhanced antimicrobial properties and optimized mechanical performance—will further expand their applications in industries that require high reliability and strict hygiene standards.
