Food heavy metal detector is a specialized equipment used to detect the content of heavy metal elements in food. Heavy metals generally refer to metals with a density greater than 4.5g/cm³. In the food industry, common harmful heavy metals to the human body include lead, cadmium, mercury, arsenic, chromium, etc. These heavy metal elements are widely present in nature, but due to industrial pollution, agricultural non-point source pollution, and other reasons, they may enter food during production, processing, storage, and transportation. When the human body ingests excessive amounts of heavy metals, they accumulate in the body, causing damage to the nervous system, immune system, reproductive system, and even leading to serious diseases such as cancer. The food heavy metal detector can quickly and accurately detect the content of heavy metals in food, providing important basis for food safety supervision.

United States market for Food Heavy Metal Detector is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
