Mixers and blenders, also known as juicers, are household appliances used in the kitchen to mix ingredients and extract puree. A typical juicer has a vase-like container in which to break ingredients. And at the top of the container, there will be a small cup to keep the ingredients from spilling out while the machine is running. At the bottom of the container is a cutter set, usually designed to be detachable for easy cleaning. The seal at the bottom of the machine is to prevent water from seeping out. The entire container sits above the motor (which powers the cutter set) and has a control button on the housing of the motor machine. Most juicers now have different levels of speed to choose from.
