The global Food Pathogens Testing Service market size is predicted to grow from US\$ 5015 million in 2025 to US\$ 8011 million in 2032; it is expected to grow at a CAGR of 7.1% from 2026 to 2032.

Food Pathogens Testing Service refers to professional technical services that use microbiological, immunological, or molecular biological methods to detect Salmonella in food samples. It aims to identify the presence, quantity, and serotype of Salmonella to ensure food safety and comply with relevant regulatory requirements.

The gross profit margin of major service providers ranges from 35% to 50%.

The Food Pathogens Testing Service market is driven by the increasing global focus on food safety and the strict regulatory frameworks implemented by various countries. The frequent occurrence of foodborne disease outbreaks related to Salmonella has raised awareness among food enterprises and regulatory authorities, boosting demand for testing services. Technological advancements, such as the development of rapid detection methods (e.g., PCR and immunochromatography), have improved testing efficiency and accuracy, expanding the application scope. The growth of the food import and export industry also contributes to market expansion, as cross-border food trade requires strict pathogen testing. Major players like SGS SA and Eurofins Scientific are expanding their service networks and enhancing technical capabilities to meet the rising demand. In the future, the market is expected to grow further with the integration of AI and big data in testing processes, enabling smarter and more efficient detection solutions.
