The global Food Waste Bio Digester market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Food waste bio digester is a device that converts organic waste, such as food scraps, into biogas and fertilizer through a natural process called anaerobic digestion. Anaerobic digestion involves microorganisms that break down organic matter in the absence of oxygen, producing biogas (mainly methane and carbon dioxide) and digestate (a nutrient-rich solid or liquid residue). Biogas can be used as a renewable energy source for cooking, heating, electricity generation, or vehicle fuel. Digestate can be used as a soil amendment or fertilizer for agriculture or gardening. Food waste bio digesters can help reduce greenhouse gas emissions, landfill waste, and disposal costs, while providing valuable products from waste.
