A foot callus remover is a tool or product designed to remove calluses and thickened skin on the feet. Mechanical Removers include foot files, pumice stones, and callus shaver s. They work by physically scraping or abrading the thickened skin. Foot files are usually made of metal or plastic with a rough surface, while pumice stones are natural volcanic rocks with a porous texture that can gently exfoliate the skin. Callus shavers have a sharp blade to carefully remove the callus layers. Electric foot callus removers are becoming increasingly popular. They usually have a rotating head with an abrasive surface that can effectively remove calluses with less effort compared to manual methods. Some advanced models may also have adjustable speed settings and built-in vacuum systems to collect the removed skin debris.
