## Abstracts

The global Foot Insoles market size is predicted to grow from US\$ 3733 million in 2025 to US\$ 5080 million in 2031; it is expected to grow at a CAGR of 5.3% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Foot Insoles provide cushioning and minor support in your shoes. Because the material is soft and deforms easily, they need to be changed every three to six months on average. They may function as shoe deodorizers, provide arch support, or offer targeted relief to the heel, midsole, or ball of the foot (metatarsus).

The medical insoles segment will continue to dominate the market with highest market share. Its higher penetration rate in the foot insoles market can be attributed to the medical and therapeutic advantages it offers to diabetic and obese patients. Also, an increase in the number of knee-related injuries has propelled physicians to suggest medical insoles which not only reduces the risk of injuries but also improves the knee or joint pain.
