The Force Display Controller is an industrial device designed for force measurement and automation control. Its primary function is to receive signals from force sensors (e.g., strain gauge or piezoelectric sensors), convert them into readable force data, and display the results in real time via digital or analog interfaces. The device incorporates a signal processing module that filters, amplifies, and linearizes raw signals to eliminate noise and improve measurement accuracy. It also supports closed-loop control based on predefined parameters (e.g., target force, tolerance range) by outputting control signals (e.g., voltage, current, or digital commands) to drive actuators (e.g., motors, valves) for dynamic force regulation.

United States market for Force Display Controller is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
