Haptic interfaces work on a technology that enables the physical interaction of different devices with virtual environments (VEs) or tele operated remote systems. By using tactile feedback, these machines carry out the tasks. By receiving signals from the motor action command, which receives signals from the body movement of the user, haptic devices display the operation completed by hand movements on the computer. Force feedback haptic interface has been highly deployed in various applications such as home appliances, media players, and laptops, among others. This technology is widely being utilized in smartphones and feedback of the gaming controller. The gaming controlled is known to be a haptic interface that is deployed in between the user and controller.
