The global Force Measuring Instruments market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Force measuring instruments are instruments used for tensile, peeling, tearing and other tests of various non-metallic material specimens. It is a specially designed instrument that can measure and record the force generated during the test. According to the object of use and purpose, force measuring instruments can be further subdivided into working force measuring instruments and standard force measuring instruments. Standard force gauges are mainly used to verify or calibrate other force measuring equipment, such as deadweight, lever, hydraulic and superposition force measuring machines. Force measuring instruments are widely used in many industries, including but not limited to packaging, automotive industry, food processing and medical. In the packaging field, force measuring instruments can be used for peeling force, bottle cap opening, bottle cap torque test, etc. In the automotive industry, they can be used for operating force test, assembly force test, shock absorption test, etc. In the food processing field, they can be used for fruit hardness, adhesive strength, bottle opening force and other tests.

Force measuring instruments are widely used in aerospace, automobile manufacturing, electronics and electrical, construction and other fields. With the rapid development of these fields, the demand for force measuring instruments is also increasing. At the same time, force measuring instruments have also begun to be used in environmental monitoring, food safety and other fields, further expanding their application areas. Technological innovation is still an important driving force for the development of the force measuring instrument market. In the future, force measuring instruments will pay

more attention to technological innovation in intelligence, integration, miniaturization and portability. With the transformation and upgrading of the manufacturing industry and the improvement of the level of intelligence, the demand for force measuring instruments will further increase. Especially in the field of high-end equipment manufacturing, the demand for high-precision and high-stability force measuring instruments will be more urgent. In summary, the force measuring instrument market is facing broad development space and opportunities, and force measuring instruments will continue to maintain a steady growth trend.
