The Forest Thinning Felling Head is a mechanical device designed for forest thinning and timber harvesting, usually mounted on the end of forestry machinery such as excavators, fellers or loaders. Driven by a hydraulic system, the device integrates cutting, clamping and handling functions, and can efficiently complete the felling and moving tasks of small-diameter trees. The blade or saw blade of the felling head cuts accurately, and the clamp can firmly grasp the felled trees, reducing the damage to the surrounding environment caused by mechanical operations. It is an indispensable tool in forest management and ecological protection.
