The global Forestry Marking Crayon market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Forestry marking crayon is a specialized tool used in the forestry industry to mark trees and logs for various purposes such as timber harvesting, boundary marking, and forest management. These crayons are designed to be highly visible and durable, with a waxy or greasy composition that allows them to adhere to tree bark and wood surfaces for extended periods. They are available in various colors, often representing different meanings or actions in forestry operations, and are applied by hand directly onto tree trunks or logs.

The industry trend for forestry marking crayons is shifting towards the development of more eco-friendly and sustainable formulations, with a focus on biodegradable materials and non-toxic ingredients. There is also a growing demand for crayons that offer enhanced visibility and longevity, contributing to improved efficiency and accuracy in forestry marking and management activities.
