Forged Common Rail refers to a commonly used technology in the fuel supply system of diesel engines, which uses the forging process to manufacture fuel common rails. The common rail system is a common high-pressure direct injection fuel system in modern diesel engines. In traditional fuel injection systems, fuel is fed into the fuel injector through the fuel injection pump, which then injects the fuel into the engine combustion chamber. The common rail system uses a common rail pipe, which stores high-pressure fuel. The fuel is fed into the common rail pipe through a high-pressure fuel pump, and each fuel injector is connected to the common rail pipe.
