Forged globe valve is a globe valve manufactured by forging process, which has high strength and good sealing performance. The forged globe valve adopts a metal hard sealing structure between the valve disc and the valve seat, which can withstand high pressure and temperature. This valve drives the valve disc up and down by rotating the valve stem, thereby achieving the cutoff and circulation of the medium. Forged stop valves are widely used in petroleum, chemical industry, electric power and other industrial fields to cut off or regulate the flow of media in pipelines.
