Forged steel fittings are components used to connect, extend, or change the direction of piping in industrial applications. These fittings are made from high-strength forged steel, which undergoes a forging process where the steel is shaped under extreme pressure after being heated to a high temperature. This process gives the steel increased strength, durability, and resistance to mechanical stress compared to other types of fittings, such as those made from cast iron or cast steel. They are known for their reliability, leak resistance, and ability to handle high-pressure systems.
