Forged steel flange gate valve belongs to a forged Gate valve. The opening and closing part of the gate valve is a gate valve. The movement direction of the gate valve is perpendicular to the fluid direction. The gate valve can only be fully opened and fully closed, and can not be adjusted and throttled. According to the configuration of sealing surface, it can be divided into wedge gate valve and parallel gate valve. Most gate valves adopt forced sealing, that is, when the valve is closed, the gate shall be forced to the valve seat by external force to ensure the tightness of the sealing surface
