The global Fork Sensors market size is predicted to grow from US\$ 559 million in 2025 to US\$ 684 million in 2031; it is expected to grow at a CAGR of 3.4% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Fork sensors (slot sensors) are U shaped through-beam object detecting sensors that have the transmitter and receiver built into the opposing "fork" arms of the sensor housing.

Fork sensors are photoelectric thru beam sensors in a aluminium fork housing. These type of sensors are, because of the 5 kHz switching frequency, ideal for fast detection- and counting applications where accuracy and liability are of great importance.
