## Abstracts

The global Forklift Lead Acid Battery market size is predicted to grow from US\$ 7740 million in 2025 to US\$ 11314 million in 2032; it is expected to grow at a CAGR of 5.6% from 2026 to 2032.

In 2025, global sales of Forklift Lead Acid Battery reached 9.2 million units, with an average selling price of \$860 per unit. Forklift Lead Acid Batteries are deep-cycle batteries specifically designed to power electric forklifts and warehousing and handling equipment. They typically employ a flooded or gel structure and feature high discharge current, resistance to frequent charge and discharge cycles, and low maintenance costs. They are widely used in warehousing and logistics, ports, manufacturing plants, and cold chain distribution, and are one of the most mature and stable power solutions for traditional electric forklifts. Their upstream raw materials mainly include lead ingots, lead alloy grids, sulfuric acid electrolyte, plastic casings, and separator materials, with lead accounting for the largest share of upstream material consumption. Downstream supply relationships primarily target forklift manufacturers, logistics and warehousing companies, rental fleets, and industrial enterprise fleets. Downstream consumption is mainly driven by warehousing and handling and internal logistics within the manufacturing industry. Global total production capacity in 2025 was approximately 11.5 million units, with an average gross profit margin of approximately 17%. Future growth prospects lie in maintenance-free, long-life batteries, intelligent monitoring systems, and differentiated positioning for hybrid applications with lithium batteries. Demand and business opportunities mainly come from the replacement demand brought about by the huge stock of existing forklifts, the construction of logistics infrastructure in emerging markets, and the continued selection of lead-acid solutions by cost-sensitive users.

The forklift lead-acid battery market has entered a phase of 'dominated by existing stock

+ structural differentiation.' While short-term demand remains stable, long-term pressure from lithium battery replacement looms. From the demand side, the continued development of global warehousing and logistics, e-commerce delivery, and internal material handling in manufacturing keeps the number of electric forklifts in use high, creating a stable replacement and maintenance market. Lead-acid batteries still offer advantages such as low procurement costs, mature maintenance systems, and well-established recycling systems, especially for cost-sensitive users, small and medium-sized logistics companies, and emerging markets.

From the supply side, industry concentration is gradually increasing. Companies with large-scale recycling systems and lead recycling capabilities have a clear competitive advantage. Meanwhile, intelligent battery management, fast charging, and maintenance-free designs are becoming key areas for product upgrades. In terms of technological trends, the replacement rate of lithium batteries in high-intensity, multi-shift, and automated warehousing scenarios is accelerating, prompting lead-acid battery companies to shift towards high durability, low maintenance costs, and leasing service models. Regionally, emerging markets such as Asia Pacific, Latin America, and the Middle East remain the main sources of growth, while the European and American markets rely more on replacement demand from existing stock.

Overall, the lead-acid battery market for forklifts is a mature but still large-scale market. Future growth will depend more on replacement cycles and niche applications than on explosive expansion.
