Forklift roller bearings are a type of bearing component used to support forklift rollers, commonly found in forklift lifting devices and handling systems. They consist of inner and outer rings, rolling elements (such as balls or rollers) and cages, and are able to withstand high loads and shocks, ensuring that the rollers rotate smoothly and flexibly when moving heavy objects. Their high wear resistance and strength make them suitable for long-term use in heavy equipment such as forklifts, helping to achieve efficient and stable material handling.
