Form-in-Place conductive gaskets are flexible seals used to provide electromagnetic interference (EMI) shielding and environmental sealing in electronic devices and enclosures. They are typically made of conductive elastomers or silicone materials loaded with conductive particles such as silver, nickel, or carbon. FIP gaskets are applied directly onto the mating surfaces using automated dispensing equipment, allowing for precise and uniform sealing around complex geometries. These gaskets conform to irregularities in mating surfaces, ensuring effective shielding and sealing against moisture, dust, and other contaminants.

The global Form-in-Place Conductive Gasket market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
