Forsythia fruit extract is a standardized concentrate of plant active ingredients extracted using modern technology from the dried fruit of the traditional Chinese medicinal herb, *Forsythia suspensa*. Its function is to provide core active substances (such as forsythosides and forsythosides) that exert clear antibacterial, anti-inflammatory, antioxidant, and heat-clearing and detoxifying effects. It addresses the demand of the modern pharmaceutical and health product industries for scientifically based natural antibacterial and anti-inflammatory raw materials, while also providing the cosmetics industry with safe and effective plant-derived soothing and anti-allergic ingredients, realizing the standardized and international application of traditional Chinese medicine efficacy. The upstream supply chain mainly includes the standardized planting, harvesting, fruit drying, and preliminary processing of *Forsythia suspensa*, with the core focus on ensuring the authenticity and quality control of the raw materials. The downstream supply chain covers pharmaceutical companies (producing traditional Chinese medicine and herbal medicines), health product companies (producing immune-boosting dietary supplements), and cosmetics manufacturers (producing soothing and repairing skincare products). The final products reach consumers through hospitals, pharmacies, supermarkets, and e-commerce channels, forming a complete industrial chain from agricultural planting to health and wellness consumer products. In 2025, the production of Forsythia fruit extract is expected to be approximately 2,000 tons, with an average price of approximately US\$25 per kilogram, a gross profit margin of approximately 30%, and a single production line capacity of approximately 70 tons per year.
