Forward Collision Avoidance Assist (FCA) is an advanced safety feature in vehicles designed to help prevent or mitigate the severity of frontal collisions. Utilizing a combination of cameras, radar sensors, and other detection technologies, FCA continuously monitors the road ahead for potential obstacles such as other vehicles, pedestrians, or objects. When a potential collision is detected, the system alerts the driver with visual and auditory warnings. If the driver does not take corrective action, FCA can automatically apply the brakes to reduce the vehicle's speed and, if possible, bring it to a complete stop to avoid the collision or lessen its impact. This technology significantly enhances driving safety by providing an additional layer of protection against unforeseen hazards.

The global Forward Collision Avoidance Assist market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
