## Abstracts

Plate compactors are used to compact, soil, sand, crushed rock to provide a solid sub-base or foundation before laying concrete or hardscapes. There are 2 main types of plate compactors: Forward, and Reversible. These types are operated similarly but have some different features to suit a variety of situations. The main difference between them is that a Reversible Plate Compactor can be driven forward and backward, while Forward Plates can only be operated while moving forward. Another difference is the amount of Compaction force. Reversible Compactors tend to have larger units when needing to compact larger depths and increase productivity.
