Base panel mounted instrument, also known as FPMI, refers to an industrial instrument designed to be installed on a control panel or cabinet. It is a widely used system for monitoring and controlling various industrial processes, including temperature, pressure, flow, liquid level, and other parameters. FPMI typically consists of a display or indicator panel that provides real-time data and feedback for monitoring process variables. The panel can include analog meters, digital displays, LEDs, switches, and other indicators. A key advantage of FPMI is that it allows centralized monitoring and control of multiple process variables from a single location. This helps improve efficiency, reduce errors, and improve the safety of industrial operations. FPMI can also be integrated with other control systems, such as programmable logic controllers (PLCs) and distributed control systems (DCS), providing comprehensive control and monitoring solutions for complex industrial processes.
