The global FOUP Inspection System market size is predicted to grow from US$ 60.26 million in 2025 to US$ 112 million in 2032; it is expected to grow at a CAGR of 9.3% from 2026 to 2032.

In 2025, global sales of FOUP inspection systems reached approximately 220 units, with an average selling price of about US$280,000 per unit at the manufacturer level. Gross margins of major manufacturers were approximately 35%–45%.

FOUP inspection systems are specialized semiconductor inspection equipment designed to evaluate the quality, structural condition, and cleanliness of Front Opening Unified Pods (FOUPs), primarily for 300 mm wafer applications. These systems typically integrate machine vision, optical metrology, mechanical sensing, and contamination detection modules to inspect key FOUP components, including the enclosure, front door, locking mechanism, wafer slots, handling interfaces, and purge ports. They can identify missing components, damage, deformation, dimensional deviations, positional abnormalities, sealing defects, as well as particle and airborne molecular contamination (AMC).

Upstream components mainly include industrial cameras, optical lenses, 3D metrology modules, displacement and pressure sensors, particle counters, AMC detection modules, precision motion systems, controllers, and cleanroom-compatible structural components. Downstream users mainly include wafer fabs, semiconductor packaging and testing facilities, FOUP manufacturers, FOUP cleaning and maintenance service providers, and semiconductor R&D institutions. As automation levels in 300 mm wafer fabs continue to increase and advanced semiconductor processes impose stricter requirements on carrier cleanliness, dimensional accuracy, and reliability, FOUP
