Four-axis crusher is a kind of industrial equipment, mainly used for crushing all kinds of solid waste, such as urban garbage, rubber, plastic, tires, metal barrels, refrigerators and other waste materials. It uses a design of four cutter shafts, each equipped with shredding blade sets, which break the material by shearing, tearing and squeezing each other during rotation. The working principle of the four-axis crusher is to use the design of low speed and large torque, and to process the material to a smaller particle size at one time through the cooperation of four hydraulic or motor-driven cutter shafts. This crushing method can ensure uniform discharge and stable operation of equipment, and is suitable for environmental protection fields requiring high crushing efficiency and low energy consumption, such as resource regeneration, waste incineration pretreatment, cement kiln collaborative disposal, etc.

The global Four-Axis Crusher market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
