Four-pole Molded Case Circuit Breaker is an advanced electrical protection device designed to safely interrupt current flow in three-phase systems that include a neutral conductor. Unlike standard three-pole breakers, a four-pole MCCB features an additional pole specifically dedicated to switching and protecting the neutral line. This ensures comprehensive disconnection and safety in systems where all conductors—including neutral—must be simultaneously isolated during overloads, short circuits, or maintenance operations. The "molded case" refers to the durable, insulated housing that encases the internal components of the circuit breaker, providing physical protection, electrical insulation, and enhanced arc containment. Four-pole MCCBs are engineered with either thermal-magnetic trip units or electronic trip units. Thermal-magnetic types use bimetallic elements and magnetic coils to detect and respond to overloads and short circuits, while electronic types offer programmable settings, precise current sensing, and communication capabilities for integration into smart electrical systems.

United States market for Four-pole Molded Case Circuit Breaker is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
