The global Four-shaft Crusher market size is predicted to grow from US\$ 1564 million in 2025 to US\$ 2565 million in 2032; it is expected to grow at a CAGR of 7.4% from 2026 to 2032.

In 2025, global sales of Four-shaft Crusher reached 23,500 units, with an average selling price of US\$68,000 per unit. Global total production capacity in 2025 was approximately 29,000 units, with an average industry gross margin of about 32%. A Four-shaft Crusher is an industrial solid waste treatment device that uses four independent rotating cutter shafts for shearing, tearing, and crushing. It is mainly used for efficient volume reduction and pretreatment of large-volume, high-toughness, and complex materials. The equipment typically consists of a cutter shaft system, reducer, drive motor, hydraulic system, screen structure, intelligent control system, and heavy-duty frame. Through the coordinated operation of the four shafts, it achieves uniform crushing and stable output of materials, featuring high torque, low speed, high stability, controllable output particle size, and strong anti-entanglement ability.

Upstream suppliers mainly include high-strength alloy steel, wear-resistant cutting tools, motors, reducers, hydraulic components, bearings, controllers, and thick-plate welded structural components. Downstream consumption mainly comes from waste incineration power generation projects, renewable resource recycling companies, waste tire processing plants, plastic recycling companies, metal recycling systems, and industrial hazardous waste treatment centers.

With the strengthening of global environmental policies, the development of the circular economy, and the increasing demand for solid waste resource utilization, the four-shaft crusher market continues to expand. Future products will develop towards high torque, intelligent operation, low energy consumption, automatic monitoring, modular maintenance, and larger scale. Meanwhile, new energy battery recycling, electronic

waste treatment, and urban waste resource utilization will continue to generate new market demands and business opportunities.

The market for four-shaft crushers is expanding continuously along with the growing global demand for solid waste treatment and the development of the circular economy. As a core pre-treatment equipment in industrial solid waste, municipal solid waste, and hazardous waste treatment systems, four-shaft crushers, with their advantages of high torque, low speed, anti-winding properties, and stable output particle size, can effectively handle highly tough, large-volume, and complex mixtures. Therefore, they are widely used in waste-to-energy incineration, resource recycling, waste tire processing, electronic waste dismantling, and hazardous waste disposal. With increasingly stringent environmental regulations in various countries and higher requirements for waste reduction, resource recovery, and harmless treatment, the market demand for four-shaft crushers maintains steady growth.

From the perspective of market demand structure, municipal solid waste treatment and industrial solid waste recycling remain the largest application markets. Waste-to-energy incineration projects and large-scale resource recycling parks require pre-crushing of mixed waste to improve subsequent sorting and combustion efficiency, thus continuously driving the growth in procurement of large-scale four-shaft crushing equipment. At the same time, the rapid development of the waste tire, waste plastic, metal waste, and electronic waste recycling industries is also driving increased demand for mid-to-high-end crushing equipment. In recent years, the new energy power battery recycling market has expanded significantly. The processing of waste battery modules and packs has created new demands for high-safety and high-stability crushing equipment, becoming a new growth direction for the industry.

From a technological development perspective, four-axis crushers are upgrading towards intelligence, larger scale, and energy efficiency. Intelligent load monitoring, automatic reverse anti-jamming systems, remote fault diagnosis, and predictive maintenance functions are gradually becoming widespread, effectively improving equipment operational stability and reducing downtime. Simultaneously, high-wear-resistant tool materials, low-energy-consumption drive systems, and modular designs are also improving equipment lifespan and maintenance efficiency. With the digital development of the environmental protection industry, the integration of crushing equipment with intelligent waste treatment platforms and resource recycling management systems is also becoming an important future development direction.

Overall, the four-axis crusher market is an important sub-market within the

environmental protection equipment and resource recycling industry. Its growth is mainly driven by strengthened environmental policies, solid waste resource utilization, and the expansion of the new energy recycling industry. In the future, with the upgrading of urban waste treatment, the improvement of power battery recycling systems, and the increase in industrial solid waste treatment standards, high-efficiency, intelligent, and low-maintenance four-axis crushing equipment will become the main growth direction for the industry. Companies with core cutting tool technology, system integration capabilities, and experience in delivering large-scale projects are expected to gain a larger market share and greater profit margins in future market competition.
