The global Four-Stroke Piston Engine market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

The Four-Stroke Piston Engine is an internal combustion engine that completes the power cycle in four strokes of the piston, consisting of the intake stroke, compression stroke, combustion stroke, and exhaust stroke. During the intake stroke, the piston moves downwards, drawing a mixture of fuel and air into the combustion chamber. The compression stroke moves upward, compressing the mixture, making it more flammable. On the power stroke, ignited by a spark plug, the mixture combusts, creating pressure on the piston, transmitting its energy to the crankshaft, and driving the engine's components. Finally, on the exhaust stroke, the piston moves up, expelling the exhaust gas from the combustion chamber. Four-stroke engines are commonly used in a variety of applications, including cars, trucks, motorcycles, boats, generators, and airplanes, amongst others. They offer a higher fuel efficiency, reduced emissions, and longer lifespan than Two-Stroke Piston Engines. The higher power-to-weight ratios due to the multi-cylinder configuration of four-stroke engines makes them ideal for applications where high power output is required.

The market outlook of Four-Stroke Piston Engines looks promising, and there is an expected growth trend in the coming years. Four-stroke piston engines are widely used in various industries, including automotive, marine, aerospace, and power generation. They offer excellent fuel efficiency, have low emissions, require less maintenance, and have an extended operating lifespan compared to their two-stroke piston engine counterparts. Additionally, the demand for greener and more fuel-efficient engines has led many companies to invest in research and development of hybrid and electric

engines, which have the potential to complement the four-stroke piston engine market. Moreover, the increasing demand for renewable energy sources, such as wind and solar power, has led to a surge in the demand for generator sets powered by reliable, maintenance-free combustion engines. The increasing demand for leisure marine applications and a surge in the number of small and medium-sized aircraft also contributes to the growth of the engine market. In conclusion, the market outlook of Four-Stroke Piston Engines looks optimistic, and with advancements in technology, more efficient and environmentally-friendly engines will be produced to satisfy the consumer's requirements.
