According to our LPI (LP Information) latest study, the global FPC Coverlay market size was valued at US\$ 409.9 million in 2023. With growing demand in downstream market, the FPC Coverlay is forecast to a readjusted size of US\$ 653.4 million by 2030 with a CAGR of 6.9% during review period.

The research report highlights the growth potential of the global FPC Coverlay market. FPC Coverlay are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of FPC Coverlay. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the FPC Coverlay market.

FPC Coverlay consists of a solid sheet of polyimide with a layer of flexible adhesive. Coverlay plays the exact same function as a solder mask on rigid boards but only for flexible printed circuit boards (PCBs). Conventional solder masks have only a limited bendability, so for flex circuits that require greater bendability, coverlay is bonded (glued) on to encapsulate and protect the external copper circuit layers of a flexible printed circuit (FPC). Different from rigid PCB solder mask, coverlay is typically supplied in a roll form, sometimes in sheet and cut to size. From there, the coverlay openings needed may be drilled, routed, punched, or laser cut depending on the complexity of the flex PCB design and feature sizes. Once the pattern is created, the film is then aligned to the copper circuit layer and pressed under heat and pressure, over time, to cure the adhesive to complete the coverlay bonding.

Global FPC coverlay manufacturers include DuPont, Taiflex, Arisawa Mfg and INNOX

Advanced Materials. The top four companies hold a share about 38%. The global origins are mainly located in North America, Europe, China, Japan, South Korea and Taiwan (China). In terms of type, black coverlay is the largest segment, with a share of about 43%. And in terms of application, the double sided (SS) FPC segment holds a share of about 81 percent.
