FR-4 itself is a kind of flame-resistant material grade. In FPC, it often refers to epoxy glass fiber cloth laminate with flame-resistant grade of FR-4. We directly refer to this material as FR4. Its mechanical properties, dimensional stability, impact resistance, and moisture resistance are higher than those of paper substrates. It has excellent electrical performance, high operating temperature, and its performance is less affected by the environment. In terms of processing technology, it has great advantages over other resin glass fiber cloth substrates. This type of product is mainly used for double-sided PCB, and the amount is large. In FPC, it is mainly used as a reinforcing sheet, and is mainly used as the back of the FPC welding area to strengthen the hardness of the welding area and protect the electronics in the area after the patch.

The global market for FPC FR-4 Stiffeners is estimated to increase from US\$ million in 2021 to reach US\$ million by 2028, exhibiting a CAGR of % during 2022-2028. Keeping in mind the uncertainties of COVID-19 and Russia-Ukraine War, we are continuously tracking and evaluating the direct as well as the indirect influence of the pandemic on different end use sectors. These insights are included in the report as a major market contributor.
