The global FPC Surface Defect Inspection Machine market size is predicted to grow from US\$ 139 million in 2025 to US\$ 199 million in 2032; it is expected to grow at a CAGR of 4.3% from 2026 to 2032.

In 2025, the production volume of FPC surface defect detection machines is projected to reach 11,402 units, with an average selling price of \$12,500 per unit. The global annual production capacity for FPC surface defect detection machines stands at approximately 20,000 units, with a gross margin of approximately 34.6%. An FPC surface defect detection machine is specialized automated equipment?based on machine vision and image processing technologies?specifically designed to automatically detect various manufacturing defects on the surfaces of Flexible Printed Circuits (FPCs). Utilizing a combination of high-resolution industrial cameras and specialized light sources, the device captures high-precision images of the FPC surface. It then employs either deep learning algorithms or traditional image processing algorithms to analyze these images in real-time, identifying surface defects such as open circuits/short circuits, scratches, indentations, contamination, oxidation, pinholes, burrs, copper foil residues, and coverlay misalignment or bubbles; simultaneously, it automatically classifies, locates, and marks these defects. Typically deployed downstream of critical stages within the FPC production line?such as etching, plating, and coverlay lamination?this equipment serves as a substitute for traditional manual visual inspection. By significantly accelerating inspection speeds, enhancing inspection consistency, and reducing the rate of missed detections, it stands as a core piece of inspection equipment for achieving automated quality management and improving yield rates in the FPC manufacturing process. The upstream raw materials for FPC surface defect detection machines include camera modules, image sensor chips, edge computing chips, and similar components. The midstream segment consists of the

manufacturers of these FPC surface defect detection machines, while the downstream market is primarily comprised of industries such as consumer electronics, automotive electronics, and medical electronics.
