FPCA (Flexible Printed Circuit Assembly) is a flexible printed circuit assembly technology used to manufacture flexible circuit boards. FPCA testing equipment is equipment used to test and verify FPCA circuit boards. These devices usually use optical and electronic technologies to perform various tests and inspections on FPCA circuit boards to ensure that their quality and performance meet requirements. FPCA testing equipment can detect the electrical connectivity, resistance, capacitance, continuity and other parameters of the FPCA circuit board, and can detect possible defects on the circuit board, such as open circuits, short circuits, electrical faults, etc. These devices can also detect cosmetic defects on FPCA circuit boards, such as scratches, stains, oxidation, etc. FPCA testing equipment usually consists of multiple modules, including automatic feeding, automatic testing, automatic sorting and other functions. These devices can efficiently conduct large-volume FPCA circuit board testing and inspection, improving production efficiency and product quality.
