The global FPD-Link III Cameras market size is predicted to grow from US\$ 6143 million in 2025 to US\$ 14275 million in 2032; it is expected to grow at a CAGR of 12.9% from 2026 to 2032.

In 2025, global FPD-Link III camera output reached about 210 million units with 300 million units of capacity, with average unit price USD 30, and gross margins around 28%. FPD-Link III cameras are automotive and industrial vision modules that use the FPD-Link III (Flat Panel Display Link III) high-speed serializer/deserializer (SerDes) technology to transmit video, control signals, and power over a single coaxial or shielded twisted-pair cable across long distances with low latency and high reliability. These cameras are widely used in advanced driver-assistance systems (ADAS), surround-view, rear-view, driver monitoring, robotics, and machine vision where real-time image transmission to a central ECU or domain controller is required. The supply chain begins upstream with CMOS image sensor manufacturers (e.g., Sony, ON Semiconductor, OmniVision), optical lens suppliers, and semiconductor vendors providing serializers/deserializers (notably Texas Instruments and other automotive connectivity chip suppliers). Midstream camera module manufacturers integrate sensors, ISP, optics, and FPD-Link III serializers into sealed camera units and often work with EMS partners for assembly, testing, and automotive qualification. Downstream customers include automotive OEMs, Tier-1 electronics suppliers, industrial automation companies, and robotics developers that deploy these cameras as part of vehicle perception systems and distributed vision architectures.

United States market for FPD-Link III Cameras is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
