According to this study, the global FPD Manufacturing Equipment market size will reach US\$ 2604 million by 2031.

A flat-panel display (FPD) is an electronic viewing technology used to enable people to see content (still images, moving images, text, or other visual material) in a range of entertainment, consumer electronics, personal computer, and mobile devices, and many types of medical, transportation and industrial equipment. They are far lighter and thinner than traditional cathode ray tube (CRT) television sets and video displays and are usually less than 10 centimetres (3.9 in) thick. Flat panel display (FPD) Manufacturing Equipments are set of equipment used by FPD manufacturers to manufacture and test displays for their different product groups.

The growth of the market depends on several factors such as the production capacity expansion of display manufacturers, the growing need for high-performance displays and the increasing demand for flat panel displays in the automotive sector.
